

FROM THE MTF AUTOMATION PROGRAMME: FOR EASY COUNTING AND STORING

TYP 202

The **MTF Pick-up System Type 202** is an integral component of the MTF automation programme. It can be used as a buffer at the end of the production chain, as a filling station during a ghost- or weekend-shift or at the transfer from production to warehouse. The goods can be packed into different containers in a specific quantity by means of a counting control.

Benefits

- Customer specific design of the filling stations in terms of number and size of the containers
- Continuous height adjustment of the arms
- Exact number of goods to be filled
- Easy operation
- Extremely stable and robust design in reliable MTF-quality
- Useable for sacks, cardboard boxes, cases etc.

DETAIL

Technical Data

- Rotary plate coated with Resopal
- Maintenance-free ball ring
- Standard diameter of the rotary plate: 1.300mm (other measurements available)
- Electric connection of 400V/50Hz
- Counting control with interface for potential-free contact of the production machine
- Mobile underframe
- Frame with control holder
- Socket (230 V / 400 V) for controlling further periphery devices optionally available
