

# MTF Belt No. 44

|                                 |                                                                         |
|---------------------------------|-------------------------------------------------------------------------|
| Top cover material              | Ropanol PUR                                                             |
| Temperature resistance          | -15°C / +80°C                                                           |
| Total thickness                 | ca. 1,6 mm                                                              |
| FDA-/EU approval                | no                                                                      |
| Antistatic properties           | yes                                                                     |
| Suitability for metal detectors | no                                                                      |
| Oil and grease resistance       | no                                                                      |
| Surface hardness                | -                                                                       |
| Max. width on angled conveyors  | 300 mm                                                                  |
| Minimum roller diameter         | 20 mm                                                                   |
| Fields of application           | ESD-applications<br>Electronics industry<br>Electrostatic charged parts |
| Remarks                         | Excellent antistatic properties<br>High conductivity                    |
