THE MTF PRODUCT RANGE

INFINITE CONVEYING POSSIBILITIES

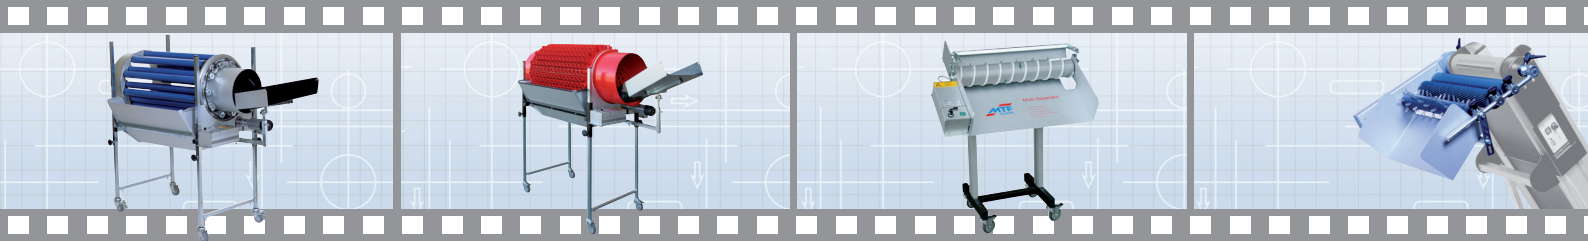

Conveyor technique | Automation | Separating systems

For more than 30 years, **MTF Technik** have offered innovative solutions of the highest quality in the areas of conveying, separation and automation.

MTF Technik offers the perfect solution for any conveying requirement, based on the modular **Multi-Tech system**. The possible combinations of 23 standard belt covers, more than 250 underframes, various guiding profiles, drive units and accessories allows adaptation to each individual task.

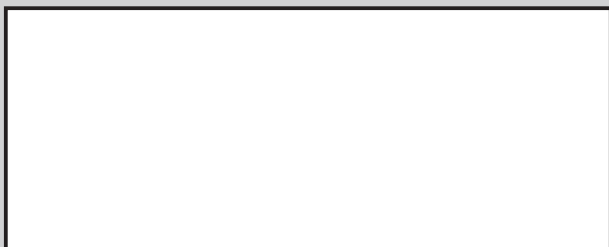

Next to the **belt conveyors**, the **Multi-Tech steel mesh**, **steel plate** and **magnetic conveyors** or the compact **I-Tech conveyors** complete the conveyor programme and therefore are suitable for special operating conditions.

The wide range of **MTF separating devices**, i.e. **different separating drums**, the **Multi-Separator**, **separating attachments** to attach to the Multi-Tech conveyors and various **special solutions** cover any separation task of injection-moulded parts and sprues for the plastics and die-casting industry.

The MTF product range is rounded off by customised **automation solutions** for a rational production. The **Multi-Lift Buffer Station**, the **Pick-up Station** and the **Multi-Rounder** are an integral part of the production chain and automate the material handling.

Turn to us and be convinced – the MTF team offers effective planning assistance to implement a customised MTF solution for your business, based on their long-term experience and special know-how. Moreover, our qualified engineers develop **special solutions** for particular tasks, up to complete **plant constructions**.

Conveyor, separation and automation systems customised to your specifications and requirements – always in MTF-quality!
